GDP at Basic Prices (2007 to 2014) 74
Chained (2007) Dollar (Real)
GDP at Basic Prices (1997 to 2014) 76

INTRODUCTION AND OVERVIEW

Introduction

The Saskatchewan Provincial Economic Accounts (SPEA) provide the principal estimates of aggregate economic activity in Saskatchewan. The main source of data is the Provincial and Territorial Economic Accounts (PTEA) produced by Statistics Canada. Revised editions of the SPEA are produced following the availability of substantial new data.

Revisions in the February 2016 Edition

The February 2016 Edition of the SPEA incorporates Statistics Canada's revisions to Saskatchewan's macroeconomic data released up to the end of 2015. These revisions reflect new estimates of economic activity as well as an increase in historical data.

The revisions in the February 2016 Edition of the SPEA are extensive. Data coverage has, in most cases, been expanded to cover the years 1981 through 2014, a significant increase in coverage from the December 2014 Edition, which covered only the 2008 through 2013 period. SPEA users should be aware that data in previous editions has been revised.

In addition to the expanded coverage and data revisions, the standard print-friendly PDF version of the SPEA has been augmented with an Excel spreadsheet version for ease of data accessibility. Both versions are available at http://stats.gov.sk.ca/pea.

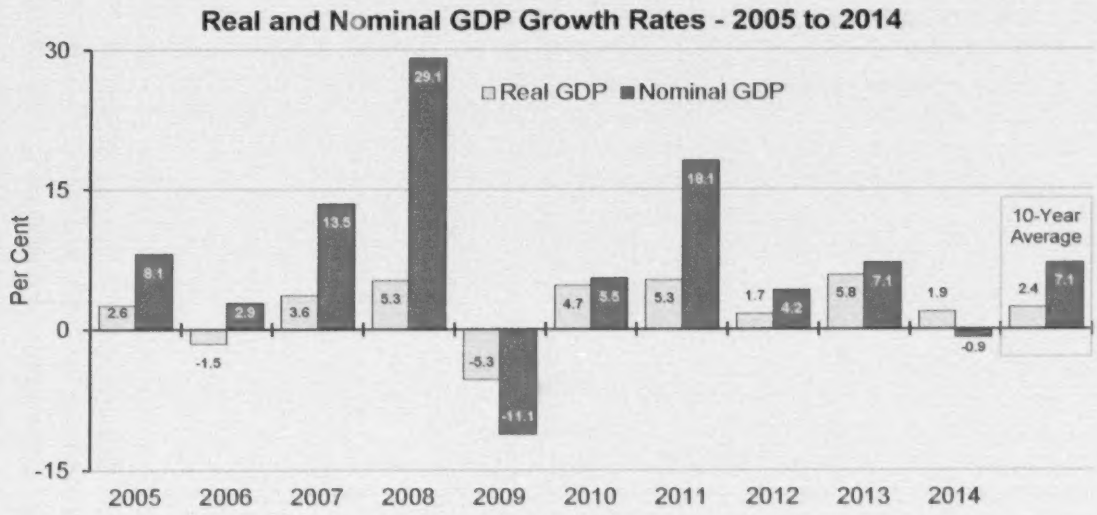
Overview and Highlights of 2014

Current Dollar (Nominal) GDP

In 2014, Saskatchewan's nominal GDP decreased by 0.9 per cent ($0.7 billion) to $82.8 billion. This was the first decrease in nominal GDP since 2009.

The relatively small decrease of $0.7 billion in nominal GDP masks significant changes in some components of GDP. The most dramatic change occurred in inventories, which grew by $2.7 billion in 2013 and were drawn down by $2.3 billion in 2014, thereby creating an almost $5.1 billion negative contribution to the 2014 change in GDP. The majority of the inventory activity occurred in the farm sector where inventories increased in 2013 due to a record harvest and then decreased in 2014 as inventories were sold.

Partially offsetting the negative effect of the change in inventories was an increase of $2.1 billion (4.3 per cent) in final consumption expenditure and an increase of $1.8 billion (25.5 per cent) in net exports. Saskatchewan recorded a trade surplus (the value of exports less imports) of $9.0 billion in 2014.



Chained 2007 Dollar (Real) GDP

In 2014, Saskatchewan's real GDP increased by 1.9 per cent ($1.2 billion) to $63.1 billion. This slower-than-normal pace of growth can be attributed to a significant contraction in the agriculture sector as output returned to normal levels following the record year of 2013. Real GDP growth in 2013 was 5.8 per cent.

A reduction in real inventories had a significant negative effect on real GDP. Where real inventories increased by $2.9 billion in 2013, they decreased by $1.4 billion in 2014, thereby creating a negative real contribution of $4.3 billion to 2014 real GDP and a negative contribution of 5.9 percentage points to 2014 real GDP growth.

The negative effect of real inventories was more than offset by an increase of $3.2 billion (7.7 per cent) in real exports, an increase of $0.9 billion (2.2 per cent) in real final consumption expenditure and a decrease of $1.4 billion (2.9 per cent) in real imports.

Household Accounts

Primary household income in Saskatchewan rose by 1.4 per cent in 2014. The compensation of employees (on a Gross National Product basis) rose 4.7 per cent and net mixed income declined by 14.0 per cent. Net property income of households rose by 6.5 per cent in 2014.

After subtracting direct taxes, contributions to social insurance plans, and pension plan contributions, household disposable income rose by 0.4 per cent in 2014 after rising 9.1 per cent in 2013.

Basic Concepts of the Economic Accounts

Economic Accounting Standards

Economic accounts are a set of statistical statements that provide aggregate perspectives and estimates of productive economic activity. They translate statistics and information related to economic activity such as income, expenditure and production into a consistent framework based on internationally accepted economic concepts and principles.

The international standard for economic accounting is the System of National Accounts (SNA). It was developed by the United Nations in 1947 and has gone through periodic revisions to accommodate changes in the world's economic environment and statistical methods. The current version is the System of National Accounts 2008 (SNA2008). It is developed, produced and released jointly by the United Nations, the European Commission, the Organisation for Economic Co-operation and Development, the International Monetary Fund and the World Bank Group. The 2008 SNA is an update of the 1993 SNA.

Canadian System of National Accounts

The Canadian System of National Accounts (CSNA) reflects the international standards embodied in the SNA and is developed, maintained and disseminated by Statistics Canada. It undergoes regular revisions to incorporate new information as well as periodic changes in international standards. Statistics Canada started releasing revisions to the CSNA in October 2012 (CSNA2012) that incorporated changes resulting from the adoption of the SNA2008 framework. The comprehensive revision of provincial economic accounts released in late 2015 is a continuation of this process.

Saskatchewan Provincial Economic Accounts

Like the SNA and CSNA, the Saskatchewan Provincial Economic Accounts (SPEA) is a set of statistical statements that provide aggregated perspectives of productive economic activity that reflect international standards, but with a focus on Saskatchewan. The statements are based on a subset of the CSNA produced by Statistics Canada and provide measures of Gross Domestic Product (GDP), its principal components, and related economic information.

Gross Domestic Product

Gross Domestic Product is the most common measure of aggregate productive economic activity. It is the total amount of productive economic activity occurring within a region during a given period of time and is expressed in currency units. At a national level in Canada, it is measured on monthly and annual bases. For Canadian provinces, it is currently measured on an annual, calendar-year basis and is expressed in terms of Canadian dollars.

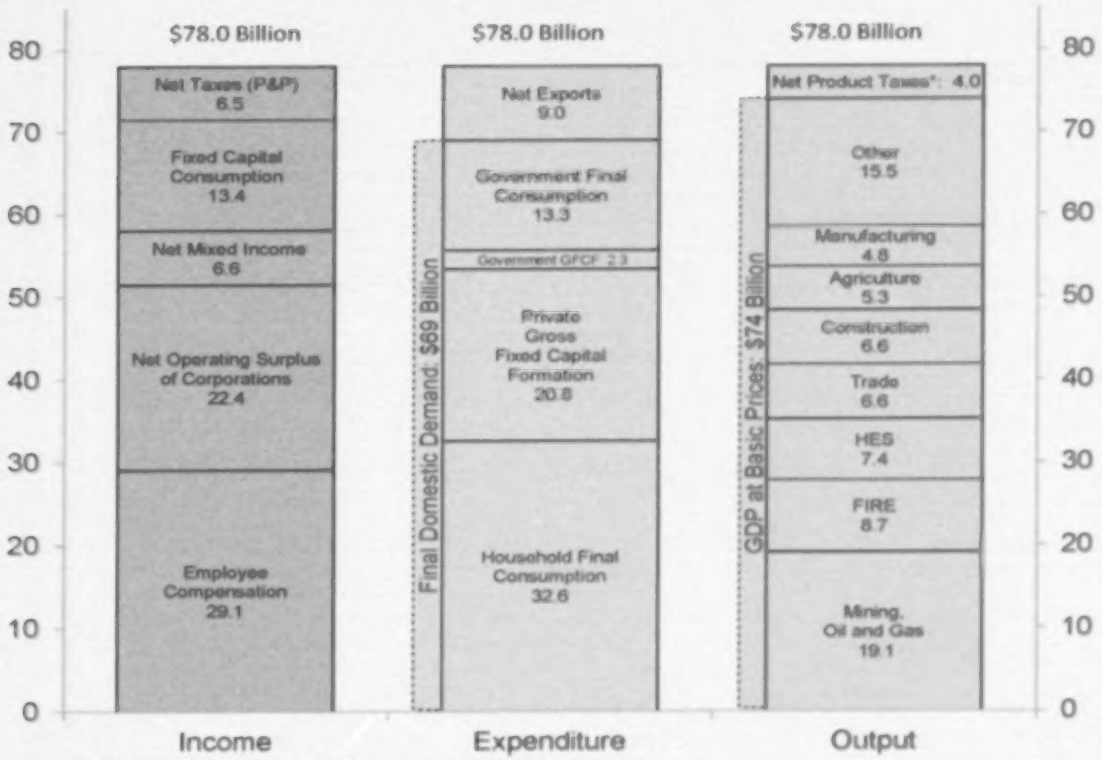
GDP Perspectives

The principal CSNA accounts reflected in the Saskatchewan PEA are the Input-Output (IO) accounts and the Income and Expenditure Accounts (IEA). Collectively, these accounts provide three perspectives or approaches to calculating GDP.

- The Income Account or income approach to calculating GDP is the sum of incomes generated in the domestic production process.
- The Expenditure Account or expenditure approach to calculating GDP is the sum of the domestic expenditures on final goods and services.
- The Output (Value Added by Industry) Account is the sum of the value added by each industry in the domestic production process.

While each of these approaches offers a different perspective on GDP, they are conceptually equal in total value.

THREE PERSPECTIVES OF SASKATCHEWAN GDP
INCOME, EXPENDITURE, OUTPUT
SASKATCHEWAN 2012 NOMINAL GDP



For illustrative clarity, some account components have been combined.
* Net product taxes have been added to output-based GDP at basic prices to show equality across accounts.

Nominal and Real GDP

GDP can also be calculated in nominal (current dollar) or real (chained dollar) terms. In concept, nominal GDP is a measure of value and real GDP is a measure of volume. The difference between the two is in the price component of the GDP calculation.

Nominal GDP is the dollar value of economic activity in a given year as measured in that year. As such, it captures the levels of both prices and quantities of goods and services in a given year. Nominal GDP is a useful metric for relative comparisons of value at a point in time or changes in the value of component shares of GDP over time.

Real GDP is expressed in terms of dollars, but the effects of changes in prices over time are removed. As such, real GDP is a statistical aggregate intended to reveal the volume or quantity of economic activity. Real GDP is a useful metric for changes in the volume or quantity of economic activity over time.

Two aspects of real GDP are noteworthy. First, the components of real GDP are not additive: the sum of real GDP components does not equal total real GDP. This is due to the chain Fisher method used to calculate real GDP. Second, there is no real GDP calculation for the income account. This is because the components of income-based GDP cannot be separated into price and quantity terms.
